

Vision. Fascination. Video.

Solutions provider & systems integrator

CoE for professional
digital video systems

Digital video broadcasting and telecommunication

Vision. Fascination. Video.

Divitel has established a reputation as a solutions provider & systems integrator in the European DVB and broadcast market. The company is regarded as a Center of Excellence and has a broad experience in the fields of digital and analog TV, broadcasting and IPTV solutions.

Companies offering digital television turn to Divitel to effectively set up the entire chain. Divitel was established in 1997, it's headquarters are based in Apeldoorn, The Netherlands.

Trusted partner

Divitel has been entrusted with planning, designing, integrating, building, running and enhancing play-out centers and video head ends for over 15 years now. What sets us apart from other systems integrators and solutions providers is that we are the only European solutions provider that's independent; our enthusiastic teams are able to build, operate and manage any broadcast network or video related solution, regardless of the equipment currently in place, anywhere. Divitel manage video platforms, which are providing more than 200 million viewers on a day-to-day basis.

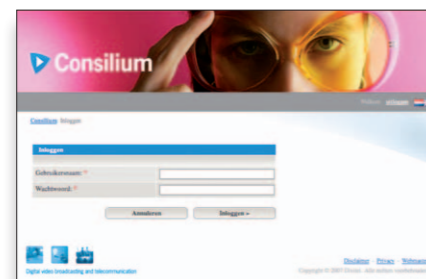

DVB and IPTV are the expertises of Divitel, which has proven to be a skilled solution partner for digital video and broadcasting solutions. Divitel is ISO 9001 certified and has a trackrecord for being a successful and reliable partner for high-tech digital video solutions. Systems have been delivered to a large number of customers and many of these systems are recognized as highly sophisticated, cutting edge solutions.

Most Divitel projects are carried out on a turn-key basis, where Divitel takes responsibility from design to delivery and

maintenance & support of the project. Divitel has a highly flexible team of specialists and is valued for that by it's customers. In support of larger projects Divitel also partners with specialists from other domains if such expertise is required. Divitel ensures that these specialists work according to our high quality standards!

Support

Divitel offers support and after-sales services to customers for fast follow-up. Also Divitel offers second-line support, preventive maintenance and repair services. Since content delivery is the life-line of our customers, these services are designed to act as quick as possible and to ensure continuity of signal delivery. Remote control facilities like **Consilium™** to delivered systems give Divitel the possibility to detect any malfunctioning in the platform and to analyse what is going on directly without any travelling.

References

The Divitel company profile lists a number of reference projects and customers and gives a general overview of the Divitel expertise. Due to our experience in media projects, Divitel is confident to be able to offer a well-considered and balanced system which is capable to be expanded and flexible to anticipate to future requirements.

Software

Divitel it's Center of Excellence is complemented by its own software development department. Divitel Development offer a wide range of software solutions, from API, GUI, EPG-converter, until high-tech provisioning software. This integration software further enhances Divitel its custom made solutions.

Training

Divitel it's Center of Excellence also offers extensive training possibilities on sold solutions. A tailor-made product instructed by the technical specialists who have been involved in the design and realization of the platform and can build on a long history of experience in the field. The positive experiences with our hands-on trainings on the actual platforms prove the effectiveness of this approach.

Business know-how

Being around in digital video systems from the incubation of the technology, Divitel has serviced customers in the European DVB and broadcasting market. Systems integrator Divitel operates as a turn-key solution provider.

Projects include:

- Research
- Consultancy
- Design
- Software development (API, UI)
- Installation
- Integration
- Settop box certification
- CAS/DRM validation
- Documentation
- Training

Services continue after the conclusion of an installation project. Divitel keeps providing support to users and advise the customer on new possibilities and enhancements to further improve our customer's business opportunities and to stay ahead of their competitors. Divitel staff is well educated and have thorough knowledge on DVB and IP technology. Also analog audio and video and RF systems are known very well. Regularly Divitel staff are attending additional training on all relevant subjects with regards to technology developments, business

opportunities and new products on the market.

Integration partners

As an independent solutions provider & systems integrator, Divitel prefers to enter into partnerships with other companies in the market, which could be both manufacturers and customers. A number of strategic alliances and business partnerships have already been achieved. These solid partnerships strengthen the mutual expertise and ensure the most appropriate solution per business case. By continuously monitoring and analysing market trends and business needs Divitel is able to advise solutions which are sustainable for a long term and in which cost of ownership versus investments and financing are taken into account.
